

# Coalition Tactical Awareness and Response

## At a Glance

### What is it?

CTAR utilizes commercial satellite imagery to produce actionable intelligence on operational timelines. The open architecture allows access to various commercial satellites and hosting of many exploitation algorithms.

### How does it work?

In-theater downlink, processing, exploitation and dissemination minimizes timelines while maximizing operational flexibility. GEOINT is rapidly injected into existing Common Operational Pictures using machine-readable formats.

### What will it accomplish?

CTAR controls each segment of the Tasking, Collection, Processing, Exploitation, and Dissemination (TCPED) timeline for rapid tasking, and data dissemination in 30 minutes from image time, providing operational entities with new sensors to improve situational awareness.
